- Other hospital facilities, participating in the hospital's Community Health Needs Assessment process
- How SSM Health St. Mary's Hospital Jefferson City will make its needs assessment widely available to the public

Message to Our Community

SSM Health St. Mary's Hospital - Jefferson City delivers exceptional, compassionate care to Cole, Miller, Moniteau and Osage Counties. Inspired by our founding Franciscan Sisters of Mary and guided by our Mission - Through our exceptional health care services, we reveal the healing presence of God - we cherish the sacredness and dignity of each person as demonstrated through our Values of compassion, respect, excellence, stewardship and community.

Consistent with our Mission, we will provide these services in collaboration with our medical staff, employees, and organizations within our communities. We rely on these relationships to help us identify and develop plans in order to address high-priority population health needs. We are grateful for the opportunity to partner with the local organizations in our efforts to improve the health of our communities.

Over the last 12 months, in collaboration with our community partners, SSM Health St. Mary's Hospital - Jefferson City conducted a Community Health Needs Assessment (CHNA) by gathering health-related information from Healthy Communities Institute (HCI) specific to Cole, Miller, Moniteau and Osage Counties. We have also interviewed key community leaders and conducted community health surveys to identify concerns about the health of these communities, while assessing the number of area-based programs and organizations that exist to address the community's needs. The identified needs were prioritized based on the level of importance to community members and the hospital's ability to make a significant impact.

The priorities we will address over the next three years include:

- Heart Disease
- Cancer

During this time, SSM Health St. Mary's Hospital - Jefferson City will further develop its community partnerships and deliver an exceptional experience through high-quality, accessible and affordable care. Please visit our website at www.ssmhealthmidmo.com to learn more about how we will continue to make a difference in our community.

I welcome your thoughts on how we can create a healthier community together.

Sincerely,

Brent VanConia

R. But Van Cenia

President at SSM Health St. Mary's Hospital – Jefferson City and Mid-Missouri region

Executive Summary

Background

SSM Health St. Mary's Hospital – Jefferson City is pleased to present the 2016 - 2018 (2016 Tax Year) Community Health Needs Assessment (CHNA). This CHNA report provides an overview of the health needs and priorities associated with our service area. The goal of this report is to provide individuals with a deeper understanding of the health needs in their community, as well as help guide the hospital in its community benefit planning efforts and development of an implementation strategy to address evaluated needs. The SSM Health Mid Missouri Regional Board approved this CHNA on Nov. 18, 2015. SSM Health St. Mary's Hospital – Jefferson City last conducted a CHNA in 2012.

The Affordable Care Act (ACA) requires 501(c)(3), tax-exempt hospitals to conduct a CHNA every three tax years and adopt a strategic implementation plan for addressing identified needs.

Priorities

SSM Health St. Mary's Hospital - Jefferson City held meetings with local, regional, and system members to determine priorities for the 2016-2018 CHNA and strategic implementation plan. Priorities chosen were:

- Heart Disease: Resources include but are not limited to the congestive heart failure clinic at Jefferson City
 Medical Group, congestive heart failure (CHF) clinic collaboration with Lutheran Senior Services, St. Joseph Bluff
 and Stonebridge communities, Cole County Health Department WISEWOMAN program, SSM Health Medical
 Group, Jefferson City YMCA, SSM Health St. Mary's Hospital Jefferson City cardiopulmonary support group,
 diabetes support group, stroke survivor support group and St. Mary's Mended Hearts program.
- Cancer: Resources include but are not limited to SSM Health St. Mary's Cancer Center at Jefferson City Medical Group (JCMG), Epic health notifications, Richard J. Wilson Cancer Resource Center, the American Cancer Society, Jefferson City YMCA, the Cole County Health Department ShowMe Healthy Women program and SSM Health Medical Group.

Goals

Heart Disease

- Reduce the age-adjusted death rate due to heart disease in our region from 190.7 deaths per 100,000 persons, as reported in 2015, to 185 deaths per 100,000 persons in 2018
- Decrease percentage of all-cause/all-location congestive heart failure (CHF) 30-day hospital readmission rate from 24.22% in 2015 to 15.3% by 2018 (Epic)

Cancer

- Reduce the age-adjusted death rate due to cancer in our region from 178.4 deaths per 100,000 persons, as reported in 2015, to 175 deaths per 100,000 persons by 2018 (MICA)
- Increase percentage of stage 1 breast cancer initial diagnosis' from 20% (hospital 5-year 2010-2014 baseline average) to 25% by 2018 (SSM Health St. Mary's Hospital - Jefferson City Cancer Registrar)
- Increase percentage of stage 1 lung cancer initial diagnosis' from 20% (hospital 5-year 2010-2014 baseline average) to 25% by 2018 (SSM Health St. Mary's Hospital - Jefferson City Cancer Registrar)

About SSM Health and SSM Health St. Mary's Hospital - Jefferson City

SSM Health

SSM Health is a Catholic, not-for-profit health system that has provided exceptional care to community members regardless of their ability to pay for more than 140 years. Guided by its Mission and Values, SSM Health is one of the largest integrated care delivery systems in the nation, serving the comprehensive health needs of communities across the Midwest.

SSM Health strives to provide a consistently exceptional experience through excellent service and high-quality, accessible and affordable care.

The SSM Health system spans four states, with care delivery sites in Illinois, Missouri, Oklahoma and Wisconsin. SSM Health includes 20 hospitals, more than 60 outpatient care sites, a pharmacy benefit company, an insurance company, two nursing homes, comprehensive home care and hospice services, a telehealth and technology company and two Accountable Care Organizations. With more than 31,000 employees, 1,100 employed physicians and 8,500 medical staff physicians, SSM Health is one of the largest employers in every community it serves.

Through our exceptional health care services, we reveal the healing presence of God.

SSM Health St. Mary's Hospital - Jefferson City

About our Community

SSM Health St. Mary's Hospital - Jefferson City is located in Jefferson City, Mo. and defines its community as Cole, Miller, Moniteau and Osage Counties. In 2015, this service area had an estimated population of over 171,000 people. The following pages of information include demographic and health indicator statistics specific to this community.

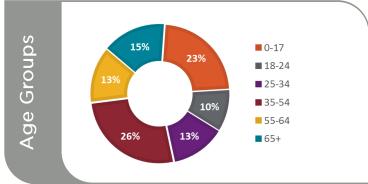

Our community by the numbers

12.3% No High School Degree
35.9% High School Degree
27.3% Some College/Associates Degree
24.5% Bachelor's Degree or Greater

The Health of Our Community

About the data

The data was derived from a variety of sources including the Healthy Communities Institute (HCI) analytics platform. The website includes the most up-to-date publicly available data for approximately 140 community indicators from over 20 sources and covering 20 topics in the areas of population health, determinants of health and quality of life. Below is a statistical overview of strengths and weaknesses within the community that factored into our discussions with local stakeholders regarding the priority health needs of the population within our service area.

Our community by the numbers

Cancer

Cancer incidence rates within the four-county area are generally higher than both state and national averages

Heart Disease

Prevalence and death rates associated with heart disease are higher than both state and national averages

Access to Primary Care

The number of providers per 100,000 persons within the fourcounty area are generally higher than the state average

Excessive Drinking

The percentage of adults who drink excessively is significantly higher than the national average. Alcohol-impaired driving deaths are also above average

Healthy Birthweights

Babies are much less likely to be born with below average or "very low" birth weight, compared to both state and national averages

Dental Care

The number of dental providers available per 100,000 persons is significantly below the state average

Depression and the age-adjusted death rate due to suicide among the Medicare population are both notably unfavorable

Fitness Opportunities

Access to exercise equipment in the community is above both state and national averages

Senior Care

Specific areas of concern within the Medicare population include arthritis, osteoarthritis, osteoporosis, depression, diabetes and heart disease

Financial Status

Indicators related to financial status, such as the percentage of people living below the poverty level, are significantly better than both state and national averages

The Health Needs of Our Community

Voice of the community

SSM Health St. Mary's Hospital - Jefferson City, in partnership with the Central Community Health Assessment Partnership (CMCHAP), conducted a comprehensive community health assessment which measured perceptions, health risks, health factors, health outcomes and characteristics specific to the communities in Cole, Miller, Moniteau and Osage counties.

The needs assessment was conducted using data analysis, discussions with community groups, provider clients and surveys completed by community members, community leaders and local physicians.

Throughout the process, more than 150 individuals participated in 9 different discussion groups and consumer interview sessions. The surveys were made available in physician offices, online and in community health departments.

SSM Health St. Mary's Hospital – Jefferson City administration reviewed community perception results and health data, prioritizing the top two needs based on the extent of the deficiency and the ability of the hospital to make an impact.

Issues identified and discussed include:

- Heart disease
- Cancer
- Obesity
- Diabetes
- Health literacy
- Childhood obesity
- Access to dental care
- Transportation
- Mental health
- Substance abuse
- Access to care
- Care coordination

Key priorities

Heart Disease

Heart disease is the leading cause of death within the service area. Additionally, there are a number of deficiencies within our community that lead to poor heart health and are exacerbated by numerous risk factors including high blood pressure, high cholesterol, diabetes, obesity, poor nutrition and smoking.

The negative effects of these risk factors can be prevented or reduced with healthy lifestyle behaviors and appropriate treatment.

Cancer

Cancer is second only to heart disease, as a leading cause of death in Cole, Miller, Moniteau and Osage Counties. The top five most common types of cancers in our region are breast, colon, lung, cervix and prostate.

Proactive screening for cancer provides a significant opportunity to reduce mortality and increase survival rates.

Heart Disease

Heart disease includes a range of conditions that affect the health of one's heart. There are a number of deficiencies within our community that correlate to poor heart health. Some of these lifestyle behaviors that increase the risk of heart disease include:

- Smoking
- Uncontrolled blood pressure
- · High cholesterol levels
- Uncontrolled diabetes
- Stress and depression
- · Unhealthy food choices
- · Lack of exercise

In some cases, minorities and those living under financial distress are often segments of the population who are most affected by factors contributing to heart disease.

Heart disease is the leading cause of death in Cole, Miller and Osage counties. It is also the top cause of inpatient hospitalizations for both men and women in the region. Further complicating the issue is a unfavorable prevalence of high blood pressure, high cholesterol, diabetes, obesity and smoking in the four counties, especially in Miller and Moniteau counties.

Additional facts and figures

- The age-adjusted death rate due to coronary heart disease is 137.10 and 137.9 deaths per 100,000 persons for Moniteau and Osage Counties, respectively, compared to rates of 123 and 105.7 deaths per 100,000 persons in the state and nation, respectively
- The Medicare population with a diagnosis of ischemic heart disease is 31.6% for Miller County, compared to state and national averages of 28.2% and 28.6%, respectively
- The Medicare population with a diagnosis of hyperlipidemia is 44.4% and 43.5% for Cole and Osage Counties, respectively, compared to state and national averages of 42.5% and 44.8%, respectively
- The Medicare population with a diagnosis of hypertension is 55.5% and 55.7% for Cole and Osage Counties, respectively, compared to state and national averages of 55.1% and 55.5%, respectively
- Counties mentioned were notably deficient out of the 4 counties included in the service area

Visit our website at ssmhealthmidmo.com

Cancer

Cancer is second only to heart disease as a leading cause of death in Cole, Miller, Moniteau and Osage Counties. The top five most common types of cancer in our region are breast, colon, lung, cervix and prostate. Specifically, breast cancer showed a significant increase of 14% in our region between 2008 - 2012.

There are a number of economic, environmental and lifestyle factors that contribute to this disparity, including agricultural processes that can potentially introduce harmful byproducts into the human system, which can lead to the development of cancer. The data also illustrates that use of tobacco products is significantly greater in our service area than most communities. While SSM Health St. Mary's Hospital - Jefferson City is not equipped to address all of these influencing factors, we are able to assist our community in providing cancer treatment options and promoting healthy lifestyle practices that are highly conducive to preventing the development of cancer. These include:

- · Regular medical exams and screenings. By increasing the chances of discovering cancer early, the success rate of treating and ultimately overcoming a cancer diagnosis also increases
- Creation of a healthy diet and promoting physically active lifestyles
- The provision of smoking cessation programs
- Immunization to protect against viral infections that lead to the development of cancer

Additional facts and figures

- Cancer prevalence in the Medicare population averages 9.1% and 9.6% for Cole and Osage Counties, respectively, compared to averages of 7.9% and 7.9% in the state and nation, respectively
- The age-adjusted death rate due to lung cancer is 71.7 per 100,000 persons in Miller County, compared to rates of 57.5 and 48.4 deaths per 100,000 persons, in the state and nation, respectively
- The colorectal cancer incidence rate is 48.5 and 49.8 cases per 100,000 persons for Moniteau and Miller Counties, respectively, compared to rates of 45.6 and 43.3 cases per 100,000 persons in the state and nation, respectively
- Counties mentioned were notably deficient out of the 4 counties included in the service area

The tax year the hospital last conducted a needs assessment

SSM Health St. Mary's Hospital - Jefferson City last conducted a CHNA in 2012.

Existing health care facilities and resources within the community that are available to respond to the health needs of the community

SSM Health St. Mary's Hospital - Jefferson City held meetings with local, regional, and system members to determine priorities for the 2016-2018 CHNA and strategic implementation plan. Priorities chosen were:

- Heart Disease: Resources include but are not limited to the congestive heart failure clinic at Jefferson City
 Medical Group, congestive heart failure (CHF) clinic collaboration with Lutheran Senior Services, St. Joseph Bluff
 and Stonebridge communities, Cole County Health Department WISEWOMAN program, SSM Health Medical
 Group, Jefferson City YMCA, SSM Health St. Mary's Hospital Jefferson City cardiopulmonary support group,
 diabetes support group, stroke survivor support group and St. Mary's Mended Hearts program.
- Cancer: Resources include but are not limited to SSM Health St. Mary's Cancer Center at Jefferson City Medical Group (JCMG), Epic health notifications, Richard J. Wilson Cancer Resource Center, the American Cancer Society, Jefferson City YMCA, the Cole County Health Department ShowMe Healthy Women program and SSM Health Medical Group.

How the data was obtained

The Central Community Health Assessment Partnership (CMCHAP) conducted a comprehensive community health assessment using publicly available data and community feedback- which allowed for the assessment of community perception- as well as current health risks and health outcomes specific to Jefferson, Cole, Moniteau and Osage Counties.

Data collected by various organizations, such as the US Census, Centers for Disease Control and Prevention, the Robert Wood Johnson Foundation and the Healthy Communities Institute, were vital to this assessment. Valuable input from community members added depth and quality to the data. The objectives were to identify factors influencing health status, determine and prioritize issues of greatest concern, identify unmet health needs and produce a source of reliable information to support the development of goals and action plans.

Additional demographic and health impact factors were collected through SSM Health's data analytics platforms and included but were not limited to county demographic profiles, cancer registrar, CHSI Summary Comparison Report, population, education, literacy rates and disparities.

The health needs of the community

Please see "The Health of Our Community" and "The Health Needs of Our Community" sections for analysis of health indicators specific to the health of our community and the identified priorities to be addressed going forward.

Primary and chronic disease needs and other health issues of uninsured persons, low-income persons and minority groups

To be maximally effective, health programs must meet a tangible need of the community. They must be presented to and accessible by the very people who need them most. The previous study of demographics, community health indicators and community feedback is necessary to assist the hospital in the planning, development, implementation and evaluation of population health programs in order to reduce disease burden within the community. SSM Health St. Mary's Hospital - Jefferson City acknowledges the populations for which disparities exist and the unique burdens associated with their demographic status.

It is SSM Health's Vision that through our participation in the healing ministry of Jesus Christ, communities, especially those that are economically, physically and socially marginalized, will experience improved health in mind, body, spirit and environment within the financial limits of the system.

The process for identifying and prioritizing community health needs and services to meet the community health needs

The Central Community Health Assessment Partnership (CMCHAP) is a unique partnership of health care and social service providers sponsored by Capital Region Medical Center and SSM Health St. Mary's Hospital - Jefferson City. Partnerships also include Community Health Center of Central Missouri; Jefferson City Medical Group; Missouri Primary Care Association; United Way of Central Missouri; and the Health Departments of Cole, Miller, Moniteau and Osage Counties.

The needs assessment was conducted using data analysis, discussions with community groups, provider clients and surveys completed by community members, community leaders and local physicians. Throughout the process, more than 150 individuals participated in nine different discussion groups and consumer interview sessions. The surveys were made available in physician offices, online and in community health departments. Valuable input from community members was used to supplement the data.

The objectives were to identify factors influencing health status, determine and prioritize issues of greatest concern, identify unmet health needs and produce a source of reliable information that will support the development of solutions. SSM Health St. Mary's Hospital - Jefferson City administration reviewed community perception results and health data, prioritizing the top two needs based on the extent of the deficiency and the ability of the hospital to make an impact.

The process for identifying and prioritizing community health needs and services to meet the community health needs (continued)

Prior to review of the data, a list of criteria was developed to aid in the selection of priority needs. During the data review process, attention was directed to health issues that met any of these criteria:

- Health issues that impact a significant portion of the population, or for which disparities exist and which put a greater burden on some population groups
- Poor rankings for health issues within the service area as compared to other counties, state average, national average or Healthy People 2020 national health goals
- Health issues for which trends are worsening

The SSM Health St. Mary's Hospital - Jefferson City CHNA team also considered indicators that relate to problems the Centers for Disease Control and other state agencies have identified through their own assessments.

In addition, the SSM Health St. Mary's Hospital - Jefferson City team examined "social determinants of health," or factors in the community that can either contribute to poor health outcomes or, conversely, support a healthy community. This data is available on our website ssmhealth.com/system and in the County Health Rankings Report.

Information gaps that limit the hospital facility's ability to assess all of the community's health needs

SSM Health St. Mary's Hospital - Jefferson City observes that, while many health status indicators for its service area might score above average, they may still represent problems that are above the medically preferable prevalence rate (i.e. nonexistent), place a heavy burden on our population, trends might be worsening and/or fall short of acceptable benchmarks. In addition, aggregate health data for the entire population often masks the unfair, heavy burdens on certain groups within the population. SSM Health St. Mary's Hospital - Jefferson City made a conscious effort to reveal and acknowledge these disparities when possible.

Which needs the hospital will not address and the reasons

Because SSM Health St. Mary's Hospital - Jefferson City has limited resources and to avoid duplication of efforts, not every health indicator with an identified need for improvement could be addressed. Those community needs identified but not "prioritized" for improvement included the following:

- Health literacy: Our input sessions revealed that there is not so much an issue with obtaining health information, as there is a need to help people process and understand basic health information, including the services available to assist them in making appropriate health and wellness decisions. SSM Health St. Mary's Hospital -Jefferson City provides education and awareness offerings on many health issues that affect the surrounding communities.
- Access to care is an ongoing priority at SSM Health St. Mary's Hospital Jefferson City. SSM Health is constantly assessing areas of physician need within our service areas and developing recruitment plans to increase access to primary care and other specialist providers in the region.
- Dental services: At this point in time, the SSM Health Medical Group is not equipped to provide dental services, but relies on and collaborates with other independent dental care providers within the community to provide associated services.
- · Substance abuse: Our community leaders pointed to drug and alcohol use as a significant issue and expressed specific concern for the region's youth. The challenge is that our region does not have a facility that provides detox or treatment. The increasing use of E-cigarettes and the misconception that they are a healthy alternative to regular cigarette smoking is concerning. SSM Heath and SSM Health St. Mary's Hospital - Jefferson City both offer awareness and education opportunities regarding the risk factors of smoking.

Persons representing the community with whom the hospital consulted

SSM Health St. Mary's Hospital - Jefferson City benefited from input derived through consultation of numerous community leaders representing diverse constituencies. The leaders associated with primary data collection are listed with their affiliations below. Additionally, SSM Health St. Mary's Hospital - Jefferson City benefited from guidance and input from individuals with expertise in public/population health.

2016-2018

Strategic Implementation Plan

Strategic Implementation Plan

Prior to review of the data, a list of criteria was developed to aid in the selection of priority areas. During the data review process, attention was directed to health issues that met any of these criteria:

- Health issues that impact many people or for which disparities exist and which put a greater burden on some population groups
- · Health issues for which trends are worsening
- Poor rankings for health issues within the service area as compared to the state average or Healthy People 2020 national health goals

The SSM Health St. Mary's Hospital - Jefferson City CHNA team also considered indicators that relate to problems the Centers for Disease Control and Prevention and other state agencies have identified through their own assessments. In addition, the team examined "social determinants of health," or factors in the community that can either contribute to poor health outcomes or support a healthy community. These data elements are available on our website ssmhealth.com/system and in the County Health Rankings report for Cole, Miller, Moniteau and Osage Counties.

Priority # | Heart Disease

Priority #2 Cancer Care

Heart Disease

Heart disease includes a range of conditions that affect the health of one's heart. There are a number of deficiencies within our community that correlate to poor heart health. Some of these lifestyle behaviors that increase the risk of heart disease include:

- Smoking
- Uncontrolled blood pressure
- · High cholesterol levels
- Uncontrolled diabetes
- Stress and depression
- · Unhealthy food choices
- Lack of exercise

In some cases, minorities and those living under financial distress are often segments of the population who are most affected by factors contributing to heart disease.

Heart disease is the leading cause of death in Cole, Miller and Osage counties. It is also the top cause of inpatient hospitalizations for both men and women in the region. Further complicating the issue is a unfavorable prevalence of high blood pressure, high cholesterol, diabetes, obesity and smoking in the four counties, especially in Miller and Moniteau counties.

Additional facts and figures

- The age-adjusted death rate due to coronary heart disease is 137.10 and 137.9 deaths per 100,000 persons for Moniteau and Osage Counties, respectively, compared to rates of 123 and 105.7 deaths per 100,000 persons in the state and nation, respectively
- The Medicare population with a diagnosis of ischemic heart disease is 31.6% for Miller County, compared to state and national averages of 28.2% and 28.6%, respectively
- The Medicare population with a diagnosis of hyperlipidemia is 44.4% and 43.5% for Cole and Osage Counties, respectively, compared to state and national averages of 42.5% and 44.8%, respectively
- The Medicare population with a diagnosis of hypertension is 55.5% and 55.7% for Cole and Osage Counties, respectively, compared to state and national averages of 55.1% and 55.5%, respectively
- Counties mentioned were notably deficient out of the 4 counties included in the service area

Strategic Implementation Plan Heart Disease

Goals

The goals of SSM Health St. Mary's Hospital - Jefferson City include:

- · Reduce the age-adjusted death rate due to heart disease in our region from 190.7 deaths per 100,000 persons, as reported in 2015, to 185 deaths per 100,000 persons in 2018 (MICA)
- Decrease percentage of all-cause/all-location congestive heart failure (CHF) 30-day hospital readmission rate from 24.22% in 2015 to 15.3% by 2018 (Epic)

Action plan

- Create heart failure clinic with Jefferson City Medical Group (JCMG)
- CHF nursing home collaboration: Visits to high-risk patients in nursing homes (Lutheran Senior Services and Stonebridge Communities)
- · High-risk screening: Implement a high-risk screening criteria tool involving mortality and post-acute committees
- · Transitional care coordination: Improve post-discharge care and coordination of support for patients
- · Focus on and improve hemoglobin A1C testing within the SSM Health Medical Group, in an effort to keep diabetic patients' respective levels in control
- · STEMI Center designation: SSM Health St. Mary's Hospital Jefferson City has applied for STEMI Center designation and is currently awaiting certification review
- Stroke Center designation: SSM Health St. Mary's Hospital Jefferson City will prepare to apply for Stroke Center designation by 2017
- · Expand nutrition and dietary counseling services: Increase dietary counseling referrals from SSM Health Medical Group (primary care) to promote healthy diet in adults with BMI >30; provide dietician assistance to the Jefferson City YMCA; and provide sponsorship funding for Boys & Girls Club Triple Play program to provide nutrition counseling services
- · Assessments and screenings: Continue community and or worksite risk assessments and screenings and education at least twice a year
- · Provider education: Increase referrals to the Cole County Health Department for WISEWOMAN screenings by increasing provider education on eligibility and referrals to program
- · Community education and awareness: Provide education on prevention and signs and symptoms awareness and implement at least one public awareness campaign such as "Know Your Numbers" or "Health Fest." In collaboration with the Jefferson City Chamber of Commerce's Partners in Education Program, refocus education outreach on cardiovascular disease prevention and awareness of risk factors. Develop Parish Nurse educational and support partnership focused on cardiovascular disease prevention and awareness of risk factors by 2017
- Support groups for patients and families to improve self-management of chronic disease: Cardiopulmonary, cardiac nutrition, diabetes, stroke survivor support groups and St. Mary's Mended Hearts

Cancer

Cancer is second only to heart disease as a leading cause of death in Cole, Miller, Moniteau and Osage Counties. The top five most common types of cancer in our region are breast, colon, lung, cervix and prostate. Specifically, breast cancer showed a significant increase of 14% in our region between 2008 – 2012.

There are a number of economic, environmental and lifestyle factors that contribute to this disparity, including agricultural processes that can potentially introduce harmful byproducts into the human system, which can lead to the development of cancer. The data also illustrates that use of tobacco products is significantly greater in our service area than most communities. While SSM Health St. Mary's Hospital - Jefferson City is not equipped to address all of these influencing factors, we are able to assist our community in providing cancer treatment options and promoting healthy lifestyle practices that are highly conducive to preventing the development of cancer. These include:

- Regular medical exams and screenings. By increasing the chances of discovering cancer early, the success rate of treating and ultimately overcoming a cancer diagnosis also increases
- · Creation of a healthy diet and promoting physically active lifestyles
- The provision of smoking cessation programs
- Immunization to protect against viral infections that lead to the development of cancer

Additional facts and figures

- Cancer prevalence in the Medicare population averages 9.1% and 9.6% for Cole and Osage Counties, respectively, compared to averages of 7.9% and 7.9% in the state and nation, respectively
- The age-adjusted death rate due to lung cancer is 71.7 per 100,000 persons in Miller County, compared to rates of 57.5 and 48.4 deaths per 100,000 persons, in the state and nation, respectively
- The colorectal cancer incidence rate is 48.5 and 49.8 cases per 100,000 persons for Moniteau and Miller Counties, respectively, compared to rates of 45.6 and 43.3 cases per 100,000 persons in the state and nation, respectively
- Counties mentioned were notably deficient out of the 4 counties included in the service area

Strategic Implementation Plan Cancer

Goals

The goals of SSM Health St. Mary's Hospital - Jefferson City include:

- Reduce the age-adjusted death rate due to cancer in our region from 178.4 deaths per 100,000 persons, as reported in 2015, to 175 deaths per 100,000 persons by 2018 (MICA)
- Increase percentage of stage 1 breast cancer initial diagnosis' from 20% (hospital 5-year 2010-2014 baseline average) to 25% by 2018 (SSM Health St. Mary's Hospital - Jefferson City Cancer Registrar)
- Increase percentage of stage 1 lung cancer initial diagnosis' from 20% (hospital 5-year 2010-2014 baseline average) to 25% by 2018 (SSM Health St. Mary's Hospital - Jefferson City Cancer Registrar)

Action plan

- Preventive mammograms: Increase referrals to Cole County Health Department for ShowMe Healthy Women
 program by implementing provider education for SSM Health Medical Group to increase awareness and referrals.
 St. Mary's Women's imaging center to provide flexible and easy scheduling and convenient hours of operations
 for screenings at least twice each year (i.e. Mammathon event). Increase the proportion of SSM Health Medical
 Group female patients 50-74 years of age who have had one or more mammograms performed during the
 measurement period of 24 months
- Patient and provider reminders: Maximize use of Epic health maintenance notifications to increase preventive screenings and kept appointments. Explore Epic reporting for health maintenance notifications for breast and lung cancer screenings that result in preventive screenings and kept appointments. Evaluate and monitor screening performance and referrals within SSM Health Medical Group and give feedback to clinic providers that can boost screening rates
- · Low-dose CT scan for lung cancer screening program: Develop low-cost screening program in 2016
- St. Mary's Cancer Center at Jefferson City Medical Group (JCMG): Identify alternative funding to support implementation of a nurse navigator and introduce cancer wellness program model in Jefferson City
- Expand patient support services provided through Richard J. Wilson Cancer Resource Center: Increase access and enrollment in LiveStrong in partnership with the Jefferson City YMCA, and introduce "I Can Cope" patient support program in collaboration with JCMG and the American Cancer Society to provide one-on-one and group education and support
- Education/awareness: Increase reach of awareness/education offerings on risk factors and important
 preventative screenings for breast and lung cancer prevention, diagnosis and treatment. Implement cancer
 screening public service/awareness campaign and educational materials that align with cancer prevention
 months
